SUMMARY

Full-Stack Software Engineer and MSc Computer Science student at the University of Helsinki, with 2+ years building production systems end-to-end. Sole engineer on a live startup recruitment platform (1,600+ users, 250+ companies) and full-stack engineer on a PCI DSS Level 1 payment gateway handling hundreds of millions of euros. Skilled in React, Next.js, Node.js, TypeScript, Java/Spring Boot, Python, and PostgreSQL, with a track record of shipping features, fixing hard production bugs, and owning deployments.

WORK EXPERIENCE

- Full-Stack Developer (Sole Engineer) – Startup Recruitment Platform** Remote
XSTRYV ([xstryv.com](#)) Mar 2026 – Jun 2026
 - Sole engineer on a live recruitment platform connecting talent with companies; owned and ran all three panels (admin, company, talent), serving **1,600+ users** and **250+ companies**.
 - End-to-End Ownership:** Shipped features, fixed production bugs, and ran deployments via GitHub Actions CI/CD – acting as a core team member shaping product decisions, not just a developer.
 - Messaging System:** Built LinkedIn-style messaging between companies and talent, with scheduled CRON jobs that send one summary email after a conversation goes quiet.
 - Race-Condition Fix:** Traced and fixed a race condition between two signup paths that mismatched user IDs across the Supabase auth and application schemas, restoring data integrity.
 - Self-Serve Hiring:** Built a self-serve workflow for companies to shortlist, reject, and accept candidates with data export, plus bulk messaging and announcements.
 - AI-Native Delivery:** Fixed pre-existing data inconsistencies across the auth and app layers; sped up delivery ~10x using AI-native development with Cursor and Claude.

Tech stack: Next.js, React, TypeScript, Node.js, PostgreSQL, Supabase, REST APIs, CRON Jobs, GitHub Actions (CI/CD), Cursor, Claude
- Full-Stack Engineer – Payment Gateway (Fintech)** Ireland, Remote
Datapulse Technologies, Full-time Jun 2024 – Jul 2025
 - Full-stack engineer on a PCI DSS Level 1 payment gateway (25+ year legacy) running in 20+ currencies and processing hundreds of millions of euros; worked with teams across Ireland, Cyprus, and Pakistan to modernize core services.
 - Google Pay Integration:** Onboarded the gateway as a Google-listed processor and integrated Google Pay with full merchant support (notifications, webhooks, emails).
 - Apple Pay Integration:** Helped complete Apple Pay integration into the core gateway.
 - REST APIs for Mobile:** Built PCI-compliant, JWT-secured REST APIs that let the mobile app connect directly to the gateway and unified UX across platforms.
 - 11% Faster Processing:** Optimized queries and workflows across the gateway architecture and database, cutting end-to-end processing time by 11%.
 - Live Issue Resolution:** Worked directly with white-label merchants to fix notification, webhook, risk-rule, and performance issues, deploying to production independently.

Tech stack: React, Java, .NET, Spring Boot, REST APIs, OAuth 2.0, JWT, MSSQL, YugabyteDB, Azure, Docker
- Software Engineer Intern (Open Source)** South Korea, Remote
Bitnine Global Inc, Part-time Nov 2022 – Nov 2023
 - AgeDB-Cloud:** Built a Database-as-a-Service (DBaaS) for the Apache AGE graph database, letting users run AGE in a web interface with no local install. [GitHub](#)
 - Pgpool-II:** Added high availability for Apache AGE with load balancing and read/write splitting across servers for uninterrupted access during failures. [GitHub](#)
 - AgeViewer-Go:** Built REST APIs, routing, and sessions in Golang for the age-viewer-go desktop app used to manage Apache AGE databases. [GitHub](#)

Tech stack: React, Node.js, MongoDB, Golang, C/C++, Apache AGE, PostgreSQL internals, PM2, DigitalOcean VMs

SKILLS

- **Languages:** JavaScript, TypeScript, Python, Java, C/C++, SQL, Shell, x86 Assembly
- **Frameworks & Libraries:** React, Next.js, Node.js, Spring Boot, .NET, FastAPI, Three.js
- **Databases:** PostgreSQL, MSSQL, MongoDB, YugabyteDB, Supabase
- **Cloud & DevOps:** Docker, Docker Compose, CI/CD, GitHub Actions, Jenkins, Azure, Linux, Git, PM2, Virtual Machines
- **Practices & Tools:** REST APIs, JWT, OAuth 2.0, Microservices, System Design, Agile, CRON Jobs, Jira; AI-assisted development (Cursor, Claude Code, GitHub Copilot)

EDUCATION

- **Master of Science in Computer Science** Sep 2025 – Present
University of Helsinki (Grade: 5/5) Helsinki, Finland
 - **Focus:** Software engineering, backend, system design, scalable architectures, and modern development practices.
 - **Coursework:** Distributed Systems, DevOps, Full-Stack Development (JavaScript, React, TypeScript, Node.js, databases).
- **Bachelor of Science in Computer Science** Sep 2020 – Jun 2024
National University of Sciences and Technology (NUST) Islamabad, Pakistan
 - **Final Year Project:** Built a VR metaverse classroom (WebXR, Three.js) with a fine-tuned LLaMA-2 7B model on Meta Quest 2 for live teacher interaction. [GitHub](#)
 - **Core Courses:** Databases, Distributed Computing, Operating Systems, OOP, Networks, Data Structures & Algorithms.

CERTIFICATIONS

- **DevOps with Docker:** Docker, Docker Compose, networking, volumes, and multi-stage builds – **UH MOOC**, 2026
- **Java Spring Framework 6 with Spring Boot 3:** Java, Spring 6, Spring Boot 3, JDBC, JPA, Security, Docker, and Microservices – **Udemy**, 2024
- **PostgreSQL Indexes:** Deep Dive into PostgreSQL Indexes – **Percona University**, 2023
- **Deep Learning Specialization:** Neural Networks and Deep Learning – **Coursera** (Andrew Ng), 2023

PERSONAL PROJECTS

- **JSON Files Search Engine:** Built a search engine inspired by Google's research paper "The Anatomy of a Large-Scale Hypertextual Web Search Engine," querying 6 GB of JSON data for multi-word searches in under 1 second. [GitHub](#)
Tech stack: Python, NLTK
- **Fine-tuning DistilGPT-2 for Writing Prompts:** Fine-tuned DistilGPT-2 on a 273K-example writing-prompts dataset to generate coherent, creative stories from prompts. [GitHub](#)
Tech stack: Python, PyTorch, Transformers, Hugging Face
- **National ID Card Detector:** Developed an OpenCV application detecting ID cards with 95% accuracy across varying angles, dimensions, and environments; initially tailored for Pakistan's National ID. [GitHub](#)
Tech stack: Python, OpenCV
- **Snake Game in x86 Assembly:** Led a team of three to build a Snake game in assembly, featuring dynamic movement, collision detection, and reward generation with manual stack/heap memory management. [GitHub](#)
Tech stack: x86 Assembly, MASM/TASM

VOLUNTEER EXPERIENCE

- **Slush Volunteer (2025):** Supported Founder Days at Slush (Europe's largest startup event), helping coordinate a **1,500+ founder** gathering through on-site operations and attendee guidance.
- **United Nations Millennium Fellowship – Campus Director (2023):** Selected as a Millennium Fellow (top 9%) from 44,000 applicants across 119 nations and appointed Campus Director (top 1%); led 17 fellows across 5 projects and delivered 6 training sessions. [Profile](#)
